

User Feedback

TaskX - “Get organized. Work smarter. Stay Motivated”

1. Introduction

In the RAD model, user's suggestions and feedback are important for the development of a product. So firstly for user's suggestion, we have circulated a google form where we have asked them to choose which of the following task scheduling will they prefer:

- A. Check for all the free slots available in the day and work on the long-term task in a free slot if available.
- B. Break the long-term task into n small-tasks and schedule to work on them at your convenience. For example, you can work the long-term task 3 times for week1 and on week2 if the schedule is very tight you may not work on it at all in week2. [Long term to Short term but not compulsory].
- C. Break the long-term task into n small-tasks and compulsorily work on the tasks by adding them to the daily schedule. [Long term to Short term but compulsory].
- D. Optional where users can write their own suggestions.

Target Groups:

- **Gender:** Male/Female/Others
- **Class:** Lower/Middle/Upper Class
- **Profession:** Students/ Company Employees
- **Geographic:** Metro cities, University areas, etc.

2. Results of the Google form:

Response 1-

As shown in the above image, it is clear that the majority of the user will prefer option C i.e Break the long-term task into n small-tasks and compulsorily work on the tasks by adding them to the daily schedule [Long term to Short term but compulsory].

So considering the user's suggestions, we have applied option C (scheduling type) in the product.

Response 2-

What is your view/idea about the provided options and what other improvement would you like for long-term scheduling?

7 responses

The choices are perfect for me

NA

Web app must have a timer or something which one has to ON when they start doing their task to keep track of time

This option are enough no need to improve

Consistency till goal is achieved

Nothing

Well to make it more effective you can also add some restrictions, such as you've divided the work and the work that was meant to be done today is unfinished due to some reasons. Now you've two options, the first one being that if this thing becomes a pattern such as you're missing the deadline by more than 3 times then a special type of restriction should be set. For example, the person who loves playing sports but also has to maintain marks. so if he keeps getting low marks consistently then for a while while the marks go up

As shown in the above image, the users have provided their own suggestions. Here are some good and valid suggestions which our team has considered for further development.
